

EDUCATION:

WEST TEXAS A&M UNIVERSITY – Bachelor of Fine Arts in **Musical Theater**, minor in **Computer Science** - SP2027
~ Summa Cum Laude ~ (3.90 GPA)
LEGACY HIGH SCHOOL, Midland, TX – High School Diploma - SP2023

WORK EXPERIENCE:

Campus Convenient Store (P.O.D): Clerk | 12/25 -> xx/xx (Returning) - Canyon, TX - (WTAMU - On-Campus)
Chick-Fil-A: Team Member | 12/25 -> 05/26 - Canyon, TX - (WTAMU - On-Campus)
KentKwik: Team Member/Sales Associate | 05/25 -> 08/25 - 4400 W Illinois Ave. Midland, TX, 79703
ProPetro Services: Data Science Engineer Intern | 05/24 -> 08/24 - Farm to Market 307. Midland, TX, 79706
Completed a series of projects, including: Integrating Bots for Microsoft Teams, managing Metadata from Apache SparkPools, developing Data Quality checks (Null, Duplication, Freshness, and Volume), as well as a Cost Optimization plan, alongside a fellow Intern.

LEADERSHIP:

Advanced Programming Seminar; Invited Guest Speaker (2x)

In collaboration with First In Texas & Texas Tech University, I held a presentation for the Head Robotics coaches of 6th-12th grade as well as the students from all around Texas for First Tech Challenge Robotics. August 2023 & August 2024 **

Rogue Robotics 19801, First Tech Challenge Robotics Team - SOLO TEAM

~ Design Award Winner, Control (Programming) Award Winner, Innovate Award Winner ~

PROJECTS:

GAME DEVELOPMENT:

Capture If You Can - (Godot, GDScript) | (Available Soon on Steam, EpicGameStore)

Mini-Desktop game that the user can play to pass the time while working, involving a Meta/Inception type game involving Checkers and defending your piece capture by beating an opponent in a separate game such as; Tic-Tac-Toe, Connect3, Hangman, Reaction Time, Blackjack, Chopsticks, and much more. The Checkers base game involves a point-system based A.I. as well as move-prediction cases with depth-first search and MinMax algorithms.

WEB DEVELOPMENT:

Theater Portfolio/Website loganlawhon.vercel.app

Personal, Fall 2025

Hourglass; Sand Physics -> Time Project - Python (PyGame)

Personal, 2024

Utilizing Python, I created a program that detects when the mouse cursor moves to drop sand, spanning across the spectrum of RGB hues. Based on the area of the hourglass that has been filled, a time, with the maximum value of 60, is determined where the sand can be flipped to be reshaped or continuously fall. A dump and flip button are present, with two options of UI's for the overall view.

ROBOTICS:

Rogue Robotics Under-One - Arduino Ide, Python, (HTML, CSS, JS (jQuery), Android Studio, Custom RAG A.I. Model

~ On-going ~

“Under-One” is a Beetleweight “Wedge” Combat Robot that utilizes binocular vision, an ESP32 for computing in tandem with a customized RAG LLM that allows for Autonomous Capabilities, as well as the use of casting of this data to an Android Phone for live-viewing/P.O.V and telemetry data. - Spring 2025 ~ On-going

AWARDS + CERTIFICATIONS:

DATA SCIENCE CERTIFICATION

West Texas A&M University x Texas Tech University

~ Data Science Camp. 2026 ~

2nd Place, Alternate - Regionals UIL Computer Science

World Championship Alternate - FTC Regionals

Greater Amarillo Filmmaker Award

“Falter”

Amarillo International Film Festival

2025

ACTF Irene-Ryan Acting National Alternate

Best Costume Characterization & Partner Chemistry

2025

ACTF Musical Theater Intensive Final Advancement

Sincerity Award, 2024

2024&2025
